New PAXOS® advance IP Release: 01 January 2016

New Firmware Version Numbers of Components

- Firmware Input Unit: 130.01.06.1
- Firmware Lock: 110.01.06.1
- Firmware I/O Box: 150.01.06.1
- Firmware IP Box: 190.01.06.1

New Features and Improvements

- Network functionality: The following functions are now available together with the software AS 384 NET from a central location via an IP network:
  - o display of alarm and status messages of the lock systems in real time
  - o remote blocking of lock systems
  - o programming of new user codes and locking periods into the lock systems
  - o access to the event memory of the lock systems
- For the network functionality the new IP Box is needed
- Support of VdS/EN class 4/D locks

Fixes

- Misleading requests for opening codes instead of master codes removed
- Various smaller bugs fixed, robustness improved

Known Limitations

- If a lock system contains an I/O Box(s) and an IP Box, then the power supply has to be connected to the IP Box
